

GAME DIAGRAM:

-  - 28 Green Plates
-  - 18 Blue Plates
-  - 26 White Plates
-  - 18 Yellow Plates

GAME SET UP:

- Purchase plates. *You may make color substitutions according to what you find available. Just make sure you have 4 different colors.*
- Print out the charts found on the next pages.
- Cut them apart and glue them to the inside of the appropriately colored plates.
- Set out the plates according to the diagram.
- To designate the line, you can just use more space.

Object: To travel from **side A** to **side B** of the plates in the fewest moves and have the most money.

Note: The quickest a team can possibly get to the other side is 9 moves.

GAME PLAY:

- Divide the children into 2 teams.
- Give each team \$1000 to start the game.
- Each team will take turns selecting one plate to turn over. Teams must stay on their side of the line.
- Allow different team members to choose which plate to turn over, though they should discuss the decision with their team!
- Plates can be good or bad. *(Children will need to work together and pay attention to discern how to know the good ones from the bad. You should not reveal this knowledge.)*
- Once a plate has been turned over, that team may either lose money, gain money, or stay at their current amount of money.
- After the first row, the next plate to be turned over must be "touching" that plate. So, teams can move forward, backward, side ways, or diagonally!
- Teams may NOT go back to a plate that has already been chosen.
- The first team to get to Side B gains an extra \$400!!
- The game is over after both teams have made it to side B.
- Count the money to determine the winner!! If there is a tie, then the first team that made it to side B wins.

PUT THE FOLLOWING INFORMATION ON THE INSIDE OF EACH OF THE **GREEN PLATES**.
